Crack Mus 2000 Version 2012

Quadro 1
Núcleos Temáticos e Categorias Temáticas

Núcleos Temáticos	Categorias Temáticas
1. Processo de Montagem dos Vídeos	1.a – Tempo de duração
	1.b – Local escolhido
	1.c – Formato escolhido
	1.d – Elementos do vídeo x elementos da história oral
	1.e – Tom do vídeo
	1.f – Trilha sonora
	1.g – Elementos descartados
	1.h – Segurança/ insegurança para executar a "tarefa"
2. Consumo de Substâncias Psicoativas	2.a – Uso de *crack* anterior
	2.b – Uso de *crack* atual
	2.c – Uso de outras substâncias lícitas
	2.d – Uso de outras substâncias ilícitas
3. Tratamento e "Recuperação"	3.a – Métodos de tratamento anteriores
	3.b – Métodos de tratamento atuais
	3.c – Concepções de "recuperação"/"melhora"
4. Relações entre o Passado e o Presente	4.a – Histórico familiar
	4.b – Vínculos familiares atuais
	4.c – Pontuações sobre a infância e adolescência
	4.d – Vulnerabilidade social
	4.e – Outros problemas pessoais
5. Planejamentos para o Futuro	5.a – Desejos para o futuro
	5.b – Projetos sólidos para o futuro

11: B 3, klokkepudding 2013 It's a bit awkward that myAandX were declared twice in your code and I'm not really sure what it is you want to do with the data. I suggest you look at alternative ways of accomplishing the task. Reduced burden of disease in México in the year 2000: Time trends, burden of disease and major risk factors for selected cancers. The burden of disease estimates for countries need to be updated every 5 years to assess the impact of changes in the disease profile on health status. This study updated the published burden of disease estimates for México in the year 2000. The database used in this study was drawn from the published sources and the World Health Organization's Global Burden of Disease (GBD) 2000. The data on mortality, years of life lost (YLLs), years lived with disability (YLDs) and disability-adjusted life years (DALYs) were estimated for each of the three broad causes of death and for selected cancers. A decomposition analysis was conducted to calculate the burden of selected risk factors for cancers. Global estimates of YLLs, YLDs and DALYs from selected cancers increased from 8.0 to 8.9 million, 6.8 to 7.7 million and 20.4 to 21.4 million, respectively, from 1990 to 2000. The largest increases were observed for cancers of the digestive tract, respiratory and female breast. The relative contribution of risk factors to these increases was also calculated. The estimated number of DALYs from risk factors was 20.9 million, of which 18.5 million (87.5%) were attributable to behavioural factors. The absolute and proportional contribution of alcohol, tobacco and physical inactivity increased, whereas the contribution of overweight and obesity decreased. Reducing risk factor burden is key for reducing cancer burden in México. Most of this burden is due to behavioural risk factors, especially alcohol, tobacco and physical inactivity.1. Field of the Invention The invention relates to a semiconductor memory device and a method for manufacturing the semiconductor memory device, and more particularly, to a semiconductor memory device capable of preventing a storage node contact and a gate electrode from being damaged due to a short between a floating gate and a substrate and a method for manufacturing the same. 2. Description of the Related Art Generally, a semic 8215747e6af
